AGI Reminder / Request for Report
Annual AGI Inspection / Certification Program
Environmental Resource Permit No. 36-01461-S
Application No. 970317-11
Lee County**

Dear Sir or Madam:

Pursuant to the conditions of your Environmental Resource Permit (ERP) and Section 373.423(3) of the Florida Statutes, this letter is being sent to remind you that an Annual Above Ground Impoundment (AGI) Inspection / Certification Report must be submitted for the above referenced project, no later than May 1 of this year.

The annual AGI inspection and certification must be directed, prepared, signed and sealed by a Florida Registered Professional. The report must certify that the subject dam(s), reservoir(s), impoundment(s) and appurtenant work or works are in compliance with the South Florida Water Management District's (District's) permit requirements and are adequate to protect the public health, safety and natural resources of the State. The enclosed form may be used by your Florida Registered Professional. The report must detail, if applicable, what repairs are necessary, and the schedule for completion of repair work.

In the event that the certifying Florida Registered Professional determines that major repairs to the impoundment and/or appurtenant works are necessary, the certifying professional shall immediately report this in writing to both the owner/permittee and this District. Instructions for completing this notification, including the nature and scope of repairs, schedule for completion of repairs, interim operating procedures required until repairs are complete, and reporting requirements for the completed repairs, are enclosed.

When submitting your completed inspection report we ask that you also complete and return the enclosed Contact Update Sheet.

The District now has the capability of receiving certifications, as-built plans, AGI inspection reports, conversion/transfer forms and other documents electronically via the District's

ePermitting website at www.sfwmd.gov/ePermitting. For first-time users, an account will need to be created. Reports can be submitted through eCompliance/Environmental Resource.

If you have any questions or require additional assistance, please contact me at (863) 462-5260 x3036 or via email at angarcia@sfwmd.gov in the Okeechobee Service Center.

Sincerely,

Andrea Garcia
Engineering Specialist 2

ABOVE GROUND IMPOUNDMENT INSPECTION/CERTIFICATION REPORT

THIS CHECKLIST IS TO BE USED AS A SUGGESTED GUIDE FOR ANNUAL ABOVE GROUND IMPOUNDMENT INSPECTIONS/CERTIFICATIONS. ALTHOUGH IT IS FAIRLY COMPLETE, IT SHOULD NOT BE INTERPRETED AS BEING LIMITED AND/OR ALL-INCLUSIVE IN ANY PARTICULAR CASE. THE CERTIFYING ENGINEER IS RESPONSIBLE FOR THE SCOPE OF THE INSPECTION(S) AND THE CONTENTS OF THE REPORT(S). A "YES" RESPONSE REQUIRES THAT ALTERATIONS OR REPAIRS BE SPECIFIED TO BE ACCOMPLISHED BY A SPECIAL CALENDAR DATE. IF ADDITIONAL ROOM IS NEEDED TO COMMENTS, PLEASE ADD EXTRA SHEETS.

Reporting AGI Repairs

If major repairs are necessary, the owner / permittee's licensed Florida Professional Engineer is required to:

1. Immediately report the deficiencies in writing to the owner/permittee and District staff.
2. Describe the nature and scope of the required repairs. If repairs deviate from the permitted specifications, a permit modification may be required.
3. Include a schedule for completion of the repairs.
4. Describe how the project/AGI will be operated while the repairs are being completed.
5. Once the repairs are complete, the owner/permittee's engineer shall submit a letter, signed and sealed, stating that all deficiencies have been corrected and the impoundment is safe to store water to the permitted specifications. District staff may reinspect the project upon the submittal.

Example of major repairs: failing control structure(s), emergency overflow structure(s), pump(s), seepage collection system(s), dike integrity in danger of being compromised, blocked structures, or adjustments to a structure's permitted elevation or operation

Example of minor repairs: minor rutting due to agricultural activities (i.e., cattle grazing), insignificant woody vegetation on interior and exterior dike slopes, lack of mowing, vegetation around structures not blocking flow, rust on structures, minor animal burrows. However, these minor examples can become major if the integrity of the AGI has the potential to be compromised.
