Jim,

See email below from FDEP....they agree with our position that the cut is artificial and FDEP will not consider this area to be sovereign....so we can impact.

I'll pass this information along to SFWMD.

Hey Steve/John

Thanks for the additional data....yes we concur that we would recommend proprietary requirements not apply to the subject dredged fingered area.

Scott & Richard,

Please find attached site specific survey information as it relates to the historically excavated finger. We believe that this information shows the area to be inconsistent with the historic shoreline's fairly even topography...which supports its historic excavation consistent with the previously provided aerials.

Please let us know if you have any questions. Thank you.

Hey Steve

We were really wanting to have spot elevations from your surveyor supporting that the ditch is above OHW. We do recognize it was dredged but want the spot elevations area was above....thanks

Scott & Richard,

See attached FWD from SFWMD. See pg 23 of 27 for an aerial exhibit depicting the limits of the subject "cut"shows that it is west of the area you were thinking it to be per your email. This is consistent with the previously provided historic aerials that show the system excavated from uplands sometime in the late 1970's/early 1980's.

As far as survey data, I checked our files and also checked with DWMA. We don't have on-ground spot elevations around this cut. However, the engineering plans submitted to the District with this project, and past sequences, utilize Osceola County's 2016 Lidar...which has been accepted for use by SFWMD. I've attached a copy of the lidar with the SFWMD's FWD approved limits overlaid.

Let me know if have questions or need more specific survey info.....thank you....
