<sup>2</sup> This list contains only established records of nonindigenous fish according to the U.S. Geological Survey (USGS) definition (reproducing and overwintering population). Comprehensive exotic fish lists were reviewed by USGS experts (Bill Loftus and Pam Fuller), and U.S. Fish and Wildlife (USFWC) experts (Shafland, 1996) with unique knowledge of the subject. The FWC lab uses a more conservative listing of established fishes (permanent populations so widespread no elimination is possible). The USGS listing was chosen primarily because it provides an indication of species present and capable of expansion in the future. However, any USFWC occurrences not listed by USGS are included here. There were some differences between USGS listings, so Loftus occurrences were authoritative for KY, SE, GE, and BC; Fuller for NW, NE, LO, and KR; as agreed by those reviewers.
